

PVC

shrink sleeve film

PVC (polyvinyl chloride) is the most economical and popular material for shrink sleeve packaging while the easiest film to control in the shrink process. It has excellent shrinkage rates, clarity, print quality and a wide range of shrink temperatures and shrink ratios.

properties

Excellent for high quality printing, high performance surface for increased printability, excellent transparency and flatness.

Excellent processability during printing, cutting, tubular seaming and shrinkage.

Suitable for complex shaped containers thanks to various types of maximum shrinkage ratio:

45% - 53%

Low shrink initiation temperature.
